PHASEIN launches IRMA gas technology on the US market

PHASEIN has received 510k FDA clearance to sell the VEO Multigas Monitor for Pocket PC on the US market - Stockholm, Sweden - PHASEIN develops, manufactures and markets ultra-small gas monitoring probes, which can be integrated into patient monitors, anesthesia delivery systems and ventilators. PHASEIN's multigas probe IRMA is the size of an oximeter probe and thus overcomes the common shortfalls of traditional monitors. IRMA stands for convenience, mobility and ease of integration. The target groups for the IRMA probes are international medical equipment companies working within the fields of anesthesia, intensive care and emergency care.

PHASEIN's in-house tradition and expertise in developing gas analysis systems has resulted in the launch of the world's smallest multigas analyser – the IRMA probe.

"We are excited to launch our core gas technology on the US market. This 510k represents a significant milestone for the Company and its gas analysis efforts," commented Robert Zyzanski, CEO.
