PHASEIN receives 510(k) FDA clearance for its ISA gas technology

Stockholm, Sweden - PHASEIN receives 510(k) FDA clearance to sell its ISA sidestream analyzers on the US market

PHASEIN develops, manufactures and markets ultra-compact mainstream and sidestream multigas analyzers, which can be integrated into patient monitors, anesthesia delivery systems and ventilators.

"We are excited to launch our ISA sidestream gas technology on the US market. This 510(k) represents a new opportunity for the company and our many OEM partners" commented Robert Zyzanski, CEO.

The ISA sidestream analyzers can be tailored to a variety of applications ranging from single gas capnography to advanced multigas measurement of carbon dioxide, nitrous oxide, and anesthetic agents with agent identification. ISA sidestream analyzers are the world's smallest and are available as standalone "plug-in and measure" analyzers or as easy to integrate build-in modules.

PHASEIN's in-house tradition and expertise in developing gas analysis systems has resulted in the world's smallest mainstream analyzers, the world's smallest sidestream analyzer and the world's smallest emergency capnometer.

PHASEIN's slogan "Plug-in and measure....TM" reflects the company's vision for the future.
